

## Wire Links

### You will need:

0.8mm or 0.6mm Wire  
Beads  
Closed Jump Rings

1. Take the wire and thread it through the jump ring, twisting the short end around the longer end for about 3 wraps.

2. Thread on your chosen beads, then bend the wire back on itself, leaving a loop shape at the top.

3. Add another ring into the loop and again, thread the wire around itself three times. Trim off the excess and tuck in any sharp edges with a pair of long nose pliers.

4. Continue to link in this way until your chain is the required length.
